Maximum Usability.

Libre is a new blockchain focused on making everything faster, easier, and cheaper.

Libre.org

Libre gives you the freedom to transact, save, and trade anywhere in the world without middlemen (or banks). It is the first blockchain focused on making the two most popular cryptocurrencies in the world — Bitcoin and Tether — programmable and easy to use.

Libre has no middlemen.

Instead of bankers verifying transactions through computer systems where they control your money, Libre is run network of validators who do not have access to your money and who cannot decide where you can send it and who you can send it to. The validators are elected by the holders of the LIBRE token and they run a decentralized network of computers to validate transactions on the public record of the Libre chain. Anyone can view this record using a block explorer — such as lb.libre.org/v2/explore. Anyone can register to become a validator.

Libre is for building and integrating.

Libre can be used as a payment system for a business anywhere in the world — just like digital cash. Libre can also be programmed to execute code and build applications that leverage payments and/or assets. There has already been an explosion of apps such as DeFi and NFTs, now these types of technologies can be built to use Bitcoin and Tether.

Libre is self-custody money system.

Your Libre account is secured by a cryptographic keypair. There is a public key and a private key — and they are connected through math. The public key locks your assets and it can only be unlocked through it's unique private key match. So the private key is like a 51 length password to your money.

Libre Launch

The Libre mainnet went live on July 4, 2022 — and the validators and developers have been chatting mostly in Telegram until now. It has been a collective effort of independent teams from around the world who believe that the Libre technology can power a new wave of adoption for stablecoins and Bitcoin.

Over the past year, they have built a custom layer 1 blockchain with an ultra-fast and low fee BTC/USDT swap, a fair launch, token staking, developer tools, and trustless wrapping / unwrapping of pegged Bitcoin and Tether.

The community is small, but growing — Libre is the first chain to have an on-chain affiliate program that can be useful for referring people to the chain as well as for app developers to leverage when they are incentivizing new accounts to invite their friends, family, and followers to join.
