Libre Mainnet Multisig Gov

⋮

Code updates require a multisig of the 2/3+1 of active validators.

Code Update Process

All smart contract updates for **core** functionality follow this process:

1. Unit tests written and passed by developer

2. Testing is complete on a local dev net (staging)

3. Testing is complete on Libre testnet (mimics mainnet)

4. 2/3+1 Validators have reviewed the code and approved it following the steps in 📄 **Verifying Code Updates** .

Active validators must verify and approve code changes to the Libre mainnet.
Versions of code deployed on mainnet/testnet can be viewed in

📄 **Deployed Smart Contract Versions**

.

List of Proposals

This is a list of monthly Libre mainnet code change proposals that can be verified on-chain.

- 📄 **April 2023**
- 📄 **March 2023** (PENDING)
- 📄 **February 2023** (PARTIALLY APPROVED)
- 📄 **December 2022** (APPROVED)
